

Combustion Observations

©1997 Sci-Ed Services

Name _____

Date _____ Hour _____ Table No. _____

Introduction: During this exercise, you will watch two pieces of paper towel as they undergo the process of combustion (burning). You will watch first, then write down what you saw in the space provided on the back of this sheet.

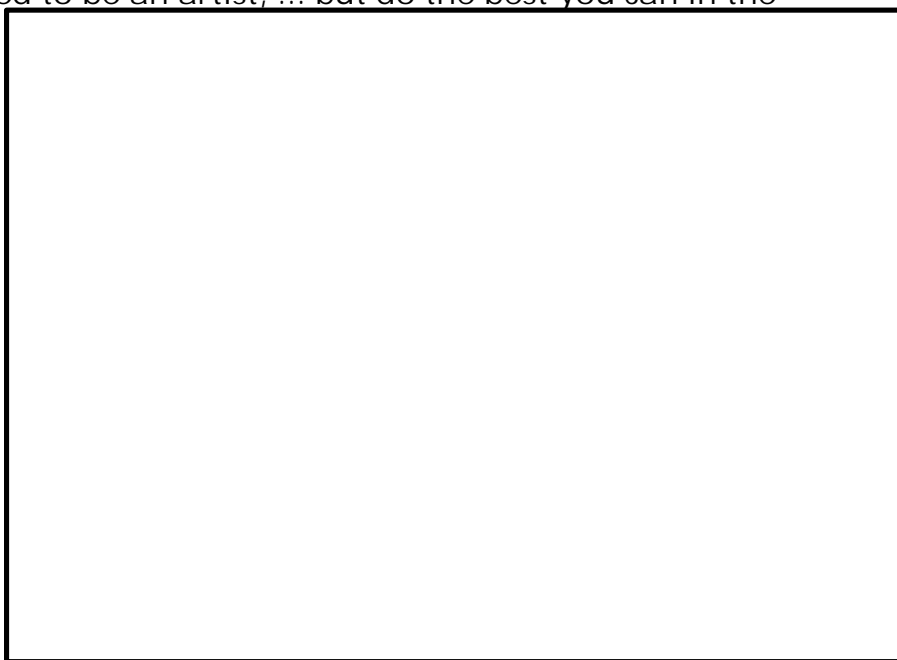

When you write observations during a laboratory exercise, it is important that you do not try to write complete sentences. You need to write short descriptions or comments that will give an accurate picture of what happened during the event.

Procedure:

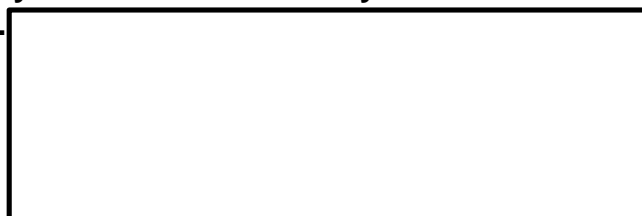

- 1. While you are waiting for the demonstration to begin, make a diagram of the apparatus in the boxed in space below.**
 - **Diagram only the ringstand and items attached to it.**
 - **Label the parts in your diagram.**

You are not expected to be an artist, ... but do the best you can in the next 10 minutes.

Diagram:

- 2. With your table partner and possibly the people across from you, make a list of the things that you think are necessary to have a fire. Print your list in the box below.**
